## DETAILED ACTION

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-38 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-2 of U.S. Patent No. 6,138,173. Although the conflicting claims are not identical, they are not patentably distinct from each other because all of the limitations presented now have already been disclosed and claimed in the above stated parent application.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2116

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 13, 14-16, 18, 19, 24, 25, 28, 32-34, 36, and 38 are rejected under 35 U.S.C. 102(b) as being anticipated by Schuller, Patent No. 4,225,948.

As to claim 19, Schuller teaches a storage device having a data input (D), a data output (S), a control input (W), and a memory (M) for storing data wherein the storage device inputs data from the data input and provides the data to the memory in accordance with a control signal from the control input by providing data to the data input to output the data to the memory, and providing a first control signal to the control input to store the data into the memory (figure 1, col. 2 line 23 – col. 3 line 30, and col. 7 line 28 – col. 8 line 16).

As to claim 24, Schuller teaches inputting the transferred data from the data output to confirm whether the data is correct (col. 2 line 23 – col. 3 line 30).

As to claim 25, Schuller teaches the memory has a mode in which the data are successively output from the memory and turning control status of the memory by providing signals to the storage device such that the memory operates in the mode (manipulating write enable signal, col. 3 lines 11-36).

Claims 1, 13, 14-16, 18, 28, 32-34, 36, and 38 are directed to the system implementing the method of claims 19, 24, and 25. Schuller teaches the method as set forth in claims 19, 24, and 25. Therefore, Schuller also teach the system as set forth in claims 1, 13, 14-16, 18, 28, 32-34, 36, and 38.
